Polymer ball bearings

# ...plastics

# xiros® polymer ball bearings | Application examples

Other exciting applications ► [www.igus.eu/xiros-applications](http://www.igus.eu/xiros-applications)

## Labelling machine

Depending on the size of the system, between 12 and 36 guide rollers are used in the SleeveMatic's film storage. Two xiros® ball bearings are used per guide roller. (Krones AG)

## Thermoforming machine

In this Thermoforming machine for coffee-cream portion packs, xiros® A500 plastic ball bearings are used for their high chemical resistance. (frischli Milchwerke GmbH)

## Bike wash system

To mount the washing brushes, the manufacturer of the "cycleWash" has used two xiros® slewing ring ball bearings with stainless steel balls. The bearing rings consist of the wear-resistant ball bearing material xirodure B180.

## Wet film thickness gauge

This precision tester for accurate and rapid measurement of all liquid paint, coatings, oil coatings and adhesives is equipped with a durable and solvent-resistant xiros® B180 polymer ball bearing.

## Film guide rollers

There is no contamination of the films through lubricants, due to the use of maintenance-free xiros® flange bearings.

## Pellet ovens

Two lubrication-free polymer ball bearings are used in the mechanical drive unit. These ensure that the pellets are fed into the combustion chamber via the roller. (Erwin Koppe – Keramische Heizgeräte GmbH)

## Pool cleaner

xiros® B180 polymer ball bearings from igus® allow pool cleaners a lubrication-free underwater operation. Resistant to chemicals, lightweight and maintenance-free.

Lubrication and maintenance-free

## Lubrication-free polymer ball bearings

xiros® polymer ball bearings revolutionise the ball bearing market. Where conventional metallic ball bearings are suitable, many applications can be successfully implemented by their maintenance-free dry operation and the use of xirodur high-performance polymers.

- Lubrication and maintenance-free
- Corrosion-resistant
- Non-metallic (due to the use of glass and plastic balls), therefore non-magnetic
- For temperatures up to +150 °C (depending on material)
- High media resistance, suitable for washdown
- Lightweight
- Electrically insulating (or ESD-compliant)
- FDA-compliant (depending on material)
- Predictable service life

### Typical application areas

- Packaging
- Textile industry
- Test engineering and quality assurance
- Optical industry
- Model making

Overview types

### xiros® radial deep groove ball bearings – standard product range for 6 materials:

- xirodur B180 – cost-effective standard
- xirodur S180 – cost-effective, black
- xirodur C160 – resistant to chemicals
- xirodur A500 – for heat and chemicals
- xirodur F180 – antistatic
- xirodur F182 – conductive
- xirodur D180 – high speeds

► **From page 828**

### xiros® radial deep groove ball bearings – materials for special applications

- xirodur M180 – detectable
- xirodur T220 – for the tobacco industry
- xirodur G220 – for temperatures up to +120 °C

► **From page 855**

### xiros® radial deep groove ball bearings with flange and guide rollers

- With single or double flange
- Made from xirodur B180 or F180
- xiros® system solution: Aluminium, PVC or carbon fibre tube with 2 fixed flange ball bearings

► **From page 858**

### xiros® radial deep groove ball bearings – further designs

- With spherical outer diameter
- Double row for higher loads
- Multi-axis bearing for rotary and linear movements

► **From page 866**

### xiros® thrust bearings

- For absorbing axial loads
- xirodur B180 with glass or stainless steel balls

► **From page 874**

### xiros® slewing ring bearing

- With glass or stainless steel balls
- Outer toothed profile
- With cage

► **From page 876**

### xiros® combinations with igubal®

- Fixed or pivoting versions
- For maintenance-free use in conveyor belts and cam rollers

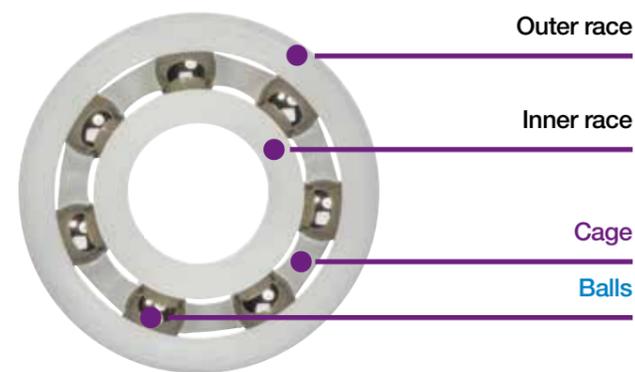

► **From page 880**

**Radial deep groove ball bearings design**

The xiros® polymer ball bearings are single-row deep groove ball bearings based on DIN 625. The lubrication and maintenance-free ball bearings consist of four components:

**The outer and inner races**

The suitability of a xiros® polymer ball bearings is largely determined by the materials of the two races. These are made from igus® tribo-polymers to maximise service life and minimise friction. Choice of 5 materials. They allow different values of application temperature, media resistance and price. The table of materials (► Page 824) provides exact information on this topic.

**The cage**

The material of the ball bearing cage must fit well to the application. The various material options have quite different chemical and temperature resistance values. The cage materials are compatible with all the different race options within xiros®.

**The balls**

The ball materials differ most significantly. In addition to steel, glass or plastics are used. This produces a large difference in mass, which in turn affects inertia, weight and chemical resistance. Stainless steel balls (1.4401) are cost-effective, resistant to chemicals and suitable for high temperatures, but are the heaviest in the range. Glass balls (soda-lime glass) are also resistant to chemicals and have a medium weight. Just like polymer balls, they are non-metallic and non-magnetic. In addition to their excellent chemical resistance, the polymer balls (PAI) are even lighter than stainless steel or glass balls.

**Other designs**

**xiros® radial deep groove ball bearings**

The other designs include:

- Convex rollers which can run directly on a profile
- Profiled rollers, e.g. for thread/cable guidance
- Thrust and slewing ring bearings for absorbing axial loads
- Multi-axis bearings for linear and radial movements
- Ball bearings designed e.g. for installation in tube ends (also for guide rollers)
- Double-row bearings for absorbing higher forces

**Pillow block and fixed flange bearings**

This range is made up by combining xiros® polymer ball bearings with the igubal® pillow block and fixed flange housings, resulting in a higher flexibility in terms of installation of the bearings. The bearing housings make it easy for the user to install these maintenance-free components. Both fixed flange and pillow block bearings are available as fixed or as pivoting design. The difference between the two options is that the pivoting type can compensate for shaft and/or bearing misalignment. A spherical outer race is pressed into the bearing housing, ensuring self-aligning action. If necessary, the inner bearing can be pivoted in all directions. Possible misalignment of two bearing points lying together can thus be compensated for.

**Measurement requirement for injection-moulded xiros® polymer ball bearings**

The outer race of our ball bearings has a conical shape. This simplifies the installation in a suitable housing (with the narrow side first). After press-fit into a housing machined to a H7 tolerance the bearing clearance is reduced. Therefore the bearings must be measured over the entire width of the ball bearing. Starting at an angle of 90° from the injection point.

**Development and tests**

Through numerous tests the race materials were optimised. The polymers we have developed for use with ball bearings allow higher speeds, greater loads, and longer service life. But the development continues. We believe that polymer ball bearing technology will continue to advance, especially with our experience in the development of tribological polymer materials. Challenge us, talk to us about your applications, tell us what you need from a polymer ball bearing. In the igus® test laboratory the service life and wear of xiros® polymer ball bearings are tested. In addition to the actual material comparison, tests indicate these experiments also answer questions about the impact of external influences such as temperature, humidity or dust.

igus® extends the xiros® test stand in the industry's largest test laboratory for plastics in motion

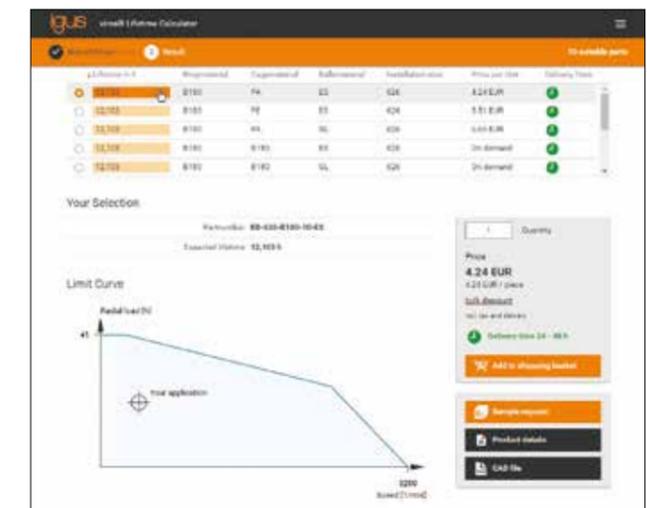

**Predictability**

As part of the development of xiros® polymer ball bearing tests are carried out continuously. The high number of test results makes it very difficult to present this information in tabular form. It is for this reason that igus® has developed the online service life calculator, which uses real test results to give an accurate calculation.

The predictability of xiros® polymer ball bearings is one of the most important advantages. Based on the results of many wear tests, the user can calculate the service life of xiros® polymer ball bearings reliably and interpret the application.

## Technical data and dimensions [mm]

Installation size	Max. stat. load capacity axial [N]	Inner Ø		Height		Weight [g]	Part No.
		d1	d2	h1	h2		
505B	150	10.4	12.0	8.4	4.3	0.92	BB-505B-B180-POM
515B	300	24.0	31.0	21.0	9.8	11.19	BB-515B-B180-POM
522B	500	36.0	45.0	30.0	9.8	29.97	BB-522B-B180-POM

## Recommended tolerances

We recommend the following hole tolerances for the ball transfer units housings:

## Installation size

- 505 ▶ 10.40mm H7
- 515/515A ▶ 23.95mm H7
- 522/522A ▶ 35.95mm H7

In general: The height tolerance of all installation sizes is  $\pm 0.2$ mm
